

Moticam 580INT

The Moticam 580INT is a fully-integrated documentation station specifically designed to enhance our BA line of professional microscopes. Whether you are using a BA210, 310 or a 410, you can easily attach the Moticam 580INT system onto the microscope. With a 10" TFT monitor built onto the camera's arm, this solution enables the microscope's image to be shared on the screen in real time. Capture 5MP still or 1080p video images onto an SD card by using the supplied Remote Control or by using the capture button on the camera. A USB as well as

a regular A/V port are still provided so that this system can be connected to a computer running Motic Images Plus software or an older analog monitor. By using the 580INT's HDMI connection, you choose to connect the camera to the built-in monitor or a larger HDMI screen of your choice.

Great for Clinics as well as Veterinarian Laboratories, upgrade your BA system with the Moticam 580 to a fully integrated documentation station.

Multi-output Connect your camera to a Computer, a Projector or an HD Monitor
